bestselling author of *The Organized Mind* and *This Is Your Brain on Music*, a primer to the critical thinking that is more necessary now than ever. We are bombarded with more information each day than our brains can process—especially in election season. It's raining bad data, half-truths, and even outright lies. New York Times bestselling author Daniel J. Levitin shows how to recognize misleading announcements, statistics, graphs, and written reports, revealing the ways lying weasels can use them. It's becoming harder to separate the wheat from the digital chaff. How do we distinguish misinformation, pseudo-facts, and distortions from reliable information? Levitin groups his field guide into two categories—statistical information and faulty arguments—ultimately showing how science is the bedrock of critical thinking. Infoliteracy means understanding that there are hierarchies of source quality and bias that variously distort our information feeds via every media channel, including social media. We may expect newspapers, bloggers, the government, and Wikipedia to be factually and logically correct, but they so often aren't. We need to think critically about the words and numbers we encounter if we want to be successful at work, at play, and in making the most of our lives. This means checking the plausibility and reasoning—not passively accepting information, repeating it, and making decisions based on it. Readers learn to avoid the extremes of passive

pitfalls of the information age and provides the means to spot and avoid them. Levitin groups his field guide into two categories--statistical information and faulty arguments--ultimately showing how science is the bedrock of critical thinking. It is easy to lie with stats and graphs as few people "take the time to look under the hood and see how they work." And, just because there's a number on something, doesn't mean that the number was arrived at properly. Logic can help to evaluate whether or not a chain of reasoning is valid. And "infoliteracy" teaches us that not all sources of information are equal, and that biases can distort data. Faced with a world too eager to flood us with information, the best response is to be prepared. A Field Guide to Lies helps us avoid learning a lot of things that aren't true.

A guide to critical thinking in the 'post-truth' era, from the author of Sunday Times best-seller *The Organized Mind* We live in a world of information overload. Facts and figures on absolutely everything are at our fingertips, but are too often biased, distorted, or outright lies. From unemployment figures to voting polls, IQ tests to divorce rates, we're bombarded by seemingly plausible statistics on how people live and what they think. Daniel Levitin teaches us how to effectively ask ourselves: can we really know that? And how do they

know that? In this eye-opening, accessible guide filled with fascinating examples and practical takeaways, acclaimed neuroscientist Daniel Levitin shows us how learning to understand statistics will enable you to make better, smarter judgements on the world around you.

Previously Published as A Field Guide to Lies We're surrounded by fringe theories, fake news, and pseudo-facts. These lies are getting repeated. New York Times bestselling author Daniel Levitin shows how to disarm these socially devastating inventions and get the American mind back on track. Here are the fundamental lessons in critical thinking that we need to know and share now. Investigating numerical misinformation, Daniel Levitin shows how mishandled statistics and graphs can give a grossly distorted perspective and lead us to terrible decisions. Wordy arguments on the other hand can easily be persuasive as they drift away from the facts in an appealing yet misguided way. The steps we can take to better evaluate news, advertisements, and reports are clearly detailed. Ultimately, Levitin turns to what underlies our ability to determine if something is true or false: the scientific method. He grapples with the limits of what we can and cannot know. Case studies are offered to demonstrate the applications of logical thinking to quite varied settings, spanning

courtroom testimony, medical decision making, magic, modern physics, and conspiracy theories. This urgently needed book enables us to avoid the extremes of passive gullibility and cynical rejection. As Levitin attests: Truth matters. A post-truth era is an era of willful irrationality, reversing all the great advances humankind has made. Euphemisms like “fringe theories,” “extreme views,” “alt truth,” and even “fake news” can literally be dangerous. Let's call lies what they are and catch those making them in the act.

Autistic people often live in a state of anxiety and confusion about the social world, running into misunderstandings and other barriers. This book unlocks the inner workings of neurotypical behavior, which can be mysterious to autistics. Proceeding from root concepts of language and culture through 62 behavior patterns used by neurotypical people, the book reveals how they structure a mental map of the world in symbolic webs of beliefs, how those symbols are used to filter perception, how they build and display their identity, how

A stimulating exploration of wandering, being lost, and the uses of the unknown from the author of *Orwell's Roses* Written as a series of autobiographical essays, *A Field Guide to Getting Lost* draws on emblematic moments and relationships in Rebecca Solnit's life to explore issues of uncertainty, trust, loss, memory, desire, and place. Solnit is interested in the stories we use to navigate our way through the world, and the places we traverse, from wilderness to cities, in finding ourselves, or losing ourselves. While deeply personal, her own stories link up to larger stories, from captivity narratives of early Americans to the use of the color blue in Renaissance painting, not to mention encounters with tortoises, monks, punk rockers, mountains, deserts, and the movie *Vertigo*. The result is a distinctive, stimulating voyage of discovery.
