Split type air conditioner | Diagram , Working , Parts. Introduction to Air Conditioning : Air conditioner is a device used to condition the air according to human comfort. Air is consisting of humidity, temperature, dust etc. The presence of these constituents makes the people to feel discomfort and reduces the efficiency of persons.

Split type air conditioner | Diagram , Working , Parts

When you get into larger air-conditioning applications, its time to start looking at split-system units. A split-system air conditioner splits the hot side from the cold side of the system, as in the diagram below. The cold side, consisting of the expansion valve and the cold coil, is generally placed into a furnace or some other air handler. The air handler blows air through the coil and routes the air throughout the building using a series of ducts.
