Introduction. This book constitutes the refereed proceedings of the 14th Industrial Conference on Advances in Data Mining, ICDM 2014, held in St. Petersburg, Russia, in July 2014.

The 16 revised full papers presented were carefully reviewed and selected from various

# Access Free Advances In

submissions. The topics range from theoretical aspects of data mining to applications of data mining, such as in multimedia data, in marketing, in medicine and agriculture and in process control, industry and society.

Abstract. Many real data come in the form of non-grid objects, i.e.

graphs, from social networks to molecules.

Adaptation of deep learning from grid-alike data (e.g. images) to

graphs has recently received unprecedented attention from both

machine learning and data mining

communities, leading to  
a new cross-domain  
field—Deep Graph  
Learning (DGL).  
Instead of painstaking  
feature engineering,  
DGL aims to learn  
informative  
representations of  
graphs in an end-to-end  
manner.
