This basic, no-nonsense book is a necessity for all firefighters assigned to the truck, as well as members of fire departments who perform the numerous responsibilities of the truck on the fireground. Throughout the book, training tips are included to help you perform the various operations efficiently and effectively. Includes a study guide.

Once upon a time, Amy's future seemed golden. Training to be a world-class ice dancer with her partner Austin, she dreamed of Olympic glory and the day when Austin would see her as something more than just the little girl he skated with. Then, in the blink of an eye, her whole life changed. Four years later, she's just another face in the crowd at her university journalism program and everyone calls her Mia. Only her closest friends and family know anything about her past of the dreams she used to have. And that's what she thought she wanted, until another twist of fate throws her temporarily back into Austin's world. Can she keep the truth about who she is hidden from the one person who used to know her better than anyone?

With decreasing demand in the traditional markets in the United States, Europe, Japan and Canada for apparels, the new-book "Clothing Demand From Emerging Markets - An Opportunity For LDC Suppliers" launched by International Trade Centre comes at an opportune time. It gives in-depth markets insight for suppliers, apparel manufacturers in the countries like India, China, Malaysia, Brazil and South Africa to do business among themselves; and at the same time least developed countries to have trade ties with these countries.

In Philadelphia, nothing is the same after a deadly shooting has everyone on edge and revenge is in the air.

Our earth has natural electromagnetic energy, and over millions of years we have evolved to live in harmony with it. In our modern world, however, human-made electromagnetic fields are increasingly common -- wifi and mobile phone networks, for example. Katie Singer argues that these fields are now so prevalent that they are threatening the health of all aspects of our world -- people, plants, bees and birds -- and in particular our memory, DNA, behaviour, attention spans, sleep patterns and susceptibility to disease. This unique book examines the effects of electrification and presents solutions for communities and individuals who welcome the benefits of our digital world, but want to limit their exposure to electromagnetic radiation.

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

Ancient Greek Beliefs explores the mysteries of the ancient myths and religious beliefs of a great people. The text is divided into three sections, Greek mythology, the ancient Greeks, and conclusions. A brief history and lengthy glossary are included. The book is designed as a basic text for the introduction to ancient Greek mythology and beliefs, and the text muses about the religious lessons we might learn from them. It contains abridged stories of Greek mythology, including the extant Greek plays, and considers portions of the works of the great writers, including Aeschylus, Euripides, Hesiod, Homer, Plato, and Sophocles. It opens a comprehensive window into the lives of these great ancient people.

In Mordin On Time, Nick Mordin sets out his method for answering the most fundamental question facing punters in any race, namely: which is the fastest horse? He was timing the sections of races with a stop watch, estimating wind strength and direction, adjusting for movements of running rails, using projected times and calculating average times years before the best-selling American books on speed rating were published. This new edition incorporates much new material, including standard times for all Irish racecourses (plus the major French ones). Mordin On Time enables the reader to construct their own speed ratings wherever they live.
