schools and then learn how to put it all together. In the movement toward standards-based education, an important question stands out: How will this reform affect the 10% of school-aged children who have disabilities and thus qualify for special education? In *Educating One and All*, an expert committee addresses how to reconcile common learning for all students with individualized education for "one"--the unique student. The book makes recommendations to states and communities that have

adopted standards-based reform and that seek policies and practices to make reform consistent with the requirements of special education. The committee explores the ideas, implementation issues, and legislative initiatives behind the tradition of special education for people with disabilities. It investigates the policy and practice implications of the current reform movement toward high educational standards for all students. *Educating One and All* examines the curricula and expected outcomes of standards-based education and the educational experience of students with disabilities--and identifies points of alignment between the two areas. The volume documents the diverse population of students with disabilities and their school experiences. Because approaches to assessment and accountability are

key to standards-based reforms, the committee analyzes how assessment systems currently address students with disabilities, including testing accommodations. The book addresses legal and resource implications, as well as parental participation in children's education.

This text is ideal for upper level students in Special Education, School Psychology, and School Counseling. The text provides a comprehensive examination of testing and the assessment process for evaluation of children ages three through eighteen. The text is based on the assumption that when a child is referred for assessment, the goal is to solve the child ' s problem by developing appropriate academic or social interventions. The emphasis throughout is on

functional assessment (i.e., assessment to help the child function better), not merely to classify; the focus is on what the child is expected to do (e.g., read, spell, etc.) versus what the child has (e.g., a learning disability). Goals are to describe how assessment data can be obtained and used by individuals engaged in the problem-solving process within educational settings and to integrate the assessment process typically used in schools with test instruments. Application has also been stressed through the frequent discussion of actual case-studies, examples, and special sections that show ' real ' people dealing with ' real ' problems. The revision has an expanded breadth of coverage so that age ranges and spectrum of disabilities are more thoroughly covered. The new, additional coverage of

portfolio, performance and authentic assessment as related to children with exceptionalities gives students the specialized knowledge they need to use the best assessment tools in their own classrooms. The second edition features improved pedagogy to help students: new glossary of terms, boldfaced terms, more figures/graphics to enhance concepts, and an appendix listing major tests and publishers.
