Chapter 6 Risk and Return Flashcards – Cram.com

What is "Risk and Return"? In investing, risk and return are highly correlated. Increased potential returns on investment usually go hand-in-hand with increased risk. Different types of risks include project-specific risk, industry-specific risk, competitive risk, international risk, and market risk. Return refers to either gains and losses made from trading a security.

Risk and Return – How to Analyze Risks and Returns in

With a risk premium of 8% over the risk-free rate of 6%, the required rate of return is 14%. Therefore, the present value of the portfolio is: $\$135,000 / 1.14 = \$118,421$. b. If the portfolio is purchased for \$118,421 and provides an expected cash inflow of \$135,000, then the expected rate of return $E(r)$ is as follows: $\$118,421 \times [1 + E(r)] = \$135,000$
