Guidance on Part J has been revised to ensure that combustion appliances can continue to function safely in more airtight homes. A new requirement has been introduced for the provision of Carbon Monoxide alarms when installing all solid fuel appliances. The changes also remove technical disincentives to the wider use of Biomass heating systems. This Approved Document J (2010) comes into effect on 1 October 2010. The Approved Documents provide technical guidance on ways of complying with the Building Regulations: they are continuously revised in line with new legislation.

Since publication of the first edition in 1976, The Building Regulations: Explained and Illustrated has provided a detailed, authoritative, highly illustrated and accessible guide to the regulations that must be adhered to when constructing, altering or extending a building in England and Wales. This latest edition has been fully revised throughout. Much of the content has been completely rewritten to cover the substantial changes to the Regulations since publication of the 13th edition, to ensure it continues to provide the detailed guidance needed by all those concerned with building work, including architects, building control officers, Approved Inspectors, Competent Persons, building surveyors, engineers, contractors and students in the relevant disciplines.

This handbook contains information and practical guidance on the environmental issues likely to be encountered at each stage in the tendering and construction phases of a building or civil engineering project. It is aimed at informing construction managers, clients, designers and other consultants, engineers and scientists on their obligations and the opportunities open to them to improve the industry's environmental performance.
