Established in 1992 and recognised across Europe and worldwide, the EU Ecolabel is a label of environmental excellence that is awarded to products and services meeting high environmental standards throughout their life-cycle: from raw material extraction, to production, distribution and disposal. The EU Ecolabel promotes the circular economy by encouraging producers to generate less waste and CO2 during the manufacturing process.

On the 29th of November 2019, the EUROPARC Federation together with European Commission organised the Seminar-Dialogue with DG Environment, a networking event that is now its third edition. Matching policy with practice and promoting an active dialogue between EU policymakers and those implementing EU nature directives on the ground, are the aims of this unique event.

By bringing together representatives of the Commission and Protected Areas professionals on an annual basis, The EUROPARC Federation aims to highlight the contribution of Protected Areas in implementing key European policies, raise awareness of managers about EU policy developments and provide the European Commission with clear insights about the challenges faced by professionals in the field.

The European Union (EU) has a hugely important effect on the way in which environmental policies are framed and implemented in many different parts of the

Download Free European Commission Dg Env

world, but especially Europe. The new and comprehensively revised edition of this well-known textbook provides a state-of-the-art analysis of all the EU's environmental policies. Comprising five parts, it covers the rapidly changing context in which EU environmental policies are made, the key actors who interact to co-produce policy and the most salient dynamics of policy making, ranging from decision making through to implementation and evaluation. Written by leading experts in the field, individual chapters examine how the EU is responding to a multitude of different problems including biodiversity loss, climate change, energy insecurity, and water and air pollution. They tease out the many important ways in which the EU's policies on these topics co-evolve with national and international environmental policies. In this third edition a mixture of learning features are employed to ensure that undergraduate and postgraduate students fully understand how EU policies in this vital area developed in the past and how they are now adapting to the rapidly evolving challenges of the twenty-first century.

The EU has been the region of the world where the most climate policies have been implemented, and where practical policy experimentation in the field of the environment and climate change has been taking place at a rapid pace over the last twenty-five years. This has led to considerable success in reducing pollution, decoupling emissions from economic growth and fostering global technological leadership. The objective of the book is to explain the EU's climate policies in an accessible way, to demonstrate the step-by-step approach that has been used to

Download Free European Commission Dg Env

develop these policies, and the ways in which they have been tested and further improved in the light of experience. The book shows that there is no single policy instrument that can bring down greenhouse gas emissions, but the challenge has been to put a jigsaw of policy instruments together that is coherent, delivers emissions reductions, and is cost-effective. The book differs from existing books by the fact it covers the EU's emissions trading system, the energy sector and other economic sectors, including their development in the context of international climate policy. Set against the backdrop of the 2015 UN Climate Change conference in Paris, this accessible book will be of great relevance to students, scholars and policy makers alike.

This book offers a deep insight into the genesis and development of the European Commission's energy and climate legislation, focusing on the interplay of politics and science. How does the Commission react when confronted with knowledge? According to the author, the Commission functions as catalyst transforming knowledge into politics.

Co-authored by an international team of researchers, this book draws on original

Download Free European Commission Dg Env

data from the largest attitudinal survey ever conducted by independent researchers inside the Commission, as well as a structured programme of interviews with senior officials. It provides an authoritative account of the European Commission of the twenty-first century and tests, challenges and refutes many widely held myths about the Commission and the people who work for it.

The ultimate goal of EU environmental policies is spelled out in the title and vision of EU's 7th Environment Action Programme (EAP): 'Living well, within the limits of our planet'. The Commission considers that this vision continues to be valid and fully in line with the UN Agenda 2030. However, in spite of the EU's ambitious policy action the achievement of the 7th EAP vision is greatly challenged. All indicators show that the Earth is facing an unprecedented ecological crisis and that many planetary boundaries have already been crossed: the economic and societal development witnessed over the past century has also caused unprecedented environmental degradation. In this context, three services of the European Commission (The Directorate General for the Environment - DG ENV, the Directorate General Joint Research Centre - JRC and the Directorate General for Research and Innovation - DG RTD) and the European Environment Agency joined their efforts to run an inclusive and participatory forward-looking process to support the reflection on the future of EU environmental policies. This process focussed on three priority themes: 1. Consumption and lifestyles 2. Sustainable food systems 3. Future of industry These three themes were addressed in a foresight

Download Free European Commission Dg Env

approach through three dedicated one-day workshops and generated a number of common conclusions: - The need for a politically agreed 2050 vision. - The need to adopt a systems approach to policy making - The realisation of the important role of citizens - The need to help businesses adopt truly sustainable business models - The importance of ensuring transparency and traceability of products throughout their life cycle - The need to take an integrated approach to the environmental challenges industry is facing - The need for an integrated policy covering food safety, security and sustainability to ensure the sustainability of the EU food system. - The realisation that EU sustainability and global sustainability go hand in hand The insights gained through this foresight exercise are intended for use by DG ENV when refining the European Commission's vision for a future EU environment strategy and EU sustainability strategy. They will be shared with other Commission services and stakeholders in the preparation of the European Green Deal announced by the President-elect Ursula von der Leyen in her political guidelines for the next European Commission 2019-2024. These guidelines already mention several of the topics discussed during this foresight exercise.

This report describes the progress made by WHO European Member States in improving their health and environment situations over the last 20 years. The assessment focuses on the aspects of health related to clean water and air, chemical safety, noise and safety at work, and environments supporting safe mobility and physical activity. These issues arise from the four regional priority

Download Free European Commission Dg Env

goals of the Children's Environment and Health Action Plan for Europe (CEHAPE), agreed at the Fourth Ministerial Conference on Environment and Health in 2004. Information collected by the European Environment and Health Information System forms the basis for the analysis. The report also presents the aspects of national policies on environment and health that are related to public governance and healthy public policy. It summarises the implementation, impact and challenges of CEHAPE in countries, using the information collected through a web-based survey conducted in November 2009.

How institutional conflicts arise in international political orders and the conditions shaping the outcomes of such conflicts has become the object of considerable contemporary focus. This book considers the dynamics of institutional conflict and institutional change in international organizations, specifically focusing on the European Union, the most highly integrated international political order on the globe. In a world where political decision making increasingly takes place above the nation state level, it theorises the social mechanisms that lead to the point at which these tensions become explicit and the customary functioning of international political orders tips into outright conflict between different organizational entities. Taking a constructivist approach, it examines two in-depth case studies - in the field of Justice and Home Affairs (JHA) and the EU's Common Foreign and Security Policy (CFSP) - to explain the dynamics of the processes that lead up to institutional conflicts and provide some explanation for their final

Download Free European Commission Dg Env

outcomes. This text will be of key interest to fields of and European Integration, EU Politics and more broadly International Relations.

This thought-provoking book offers a cross-cutting debate on EU environmental legislation from a legal perspective focussing on key themes such as regulatory instrument choice, the coherency of law, and enforceable commitments. Based on thorough
