Experiments in Topology

The subject of topology lends itself to many different kinds of experimentation for undergraduate students. But this book spends a disproportionate amount of space on the Mobius strip and related non-orientability issues when it could deal with more knot theory and homotopy theory than it does, and it could introduce finite topologies and Morse theory which abound in self-exploration.

Experiments In Topology - bitofnews.com

Experiments aim to measure the effect which an independent variable (the 'cause') has on a dependent variable ('the effect'). The key features of an experiment are control over variables, precise measurement, and establishing cause and effect relationships. In order to establish cause and effect relationships, the independent variable is changed and the dependent variable is measured; all
