maps are a powerful tool for solving eigenvalue problems in the plane. Sometimes one is interested in isoperimetric inequalities, sometimes one looks for approximate methods in order to obtain upper and lower bounds.

My first contact with an engineering application of conformal mappings occurred over 30 years ago when I was working at Hewlett-Packard in Ft. Collins, CO (now an Avago facility). At that time, I saw an article in one of the engineering trade journals (EDN, I think) that used

The fact that $u \neq 0$ and that the Fekete points are distributed according to the equilibrium measure of E leads to a numerical method for determining the conformal mapping f , see (31). By means of (18), the transfinite diameter of many sets can be found by conformal mapping.
