CiteSeerX - Document Details (Isaac Council, Lee Giles, Pradeep Teregowda): We analyze the source code of four well-known large web applications, namely WordPress, phpBB, phpMyAdmin and Drupal.

CiteSeerX - Isolating JavaScript in Dynamic Code Environments

If you don ' t care about variable scoping in JavaScript, you may face some unpleasant troubles. Properly isolate your script environment is a best practice to have so you don ' t override global variables when it executes. Immediately-invoked function expressions (IIFE) allow you do to that: ;(function() {})) Moreover, it makes your code flexible and robust so you can create global variables aliases as parameters for your script:

Properly isolate your variables in JavaScript ...

Isolation from untrusted code in our subset of Ja- vaScript is based on Itering out certain constructs (eval,Function,constructor), rewriting others (this,e[*e*2]) to allow them to be used safely, and wrapping prop- erties (e.g., object and array prototype properties) of the execution environment to further limit the impact of untrusted code.

Isolating JavaScript with Filters, Rewriting, and Wrappers

By writing CSS in JavaScript, you are isolating styles from _____ code current class package - not a corret option global namespace

By writing CSS in JavaScript, you are isolating styles ...

Figure 6 - Dynamically generated policy with a condition operator. Notice the role ' s inline policy has scoped down our Actions list, while our dynamically scoped policy has added a condition operator that limits access to data that is keyed with our tenant identifier. From a code perspective, assuming a role with STS is straightforward.

Isolating SaaS Tenants with Dynamically Generated IAM ...

verting JavaScript code and the hosting Web page. A Dsafe isolation is based on JavaScript Itering, allowing any JavaScript code that passes a static code analysis test. Facebook uses JavaScript rewriting to run applications in what is intended to be a 'separate namespace' and insert certain run-time checks. While Google Caja [4]

Language-Based Isolation of Untrusted JavaScript

Do the right-click on the Value B field and select Create Dynamic Action from the menu. Select Event as Lost Focus and Action as Execute JavaScript Code. Then add the following JavaScript code in the Code field: if (\$('P39_VAL_B') < \$('P39_VAL_A')) { apex.message.alert("Value B should be greater than or equal to Value A."); }
