3 Amazing Types of Patterns in ...

In JavaScript, the Module pattern is used to further emulate the concept of classes in such a way that we're able to include both public/private methods and variables inside a single object, thus shielding particular parts from the global scope. What this results

Javascript

In JavaScript, regular expressions are often used with the two string methods: `search()` and `replace()`. The `search()` method uses an expression to search for a match, and returns the position of the match. The `replace()` method returns a modified string where the pattern is replaced.
