A lift traffic analysis is fundamental in the design of new buildings to identify the size, speed and capacity of lifts needed to provide the levels of service required. It is one the requirements for obtaining BREEAM credits for lifts

*Lift Traffic Analysis - The Lift Consultancy - Lift ...*

Lifts and escalators are arguably the spine of any building, and along with providing structural support, they ensure the building offers access and transportation.

*Factors to consider when installing lifts and escalators*

The Mitsubishi EZ-Assist System is a members-only online system for planning elevator and escalator facility created to help elevatorprofessionals efficiently plan an elevator or escalator installation project. The free service includes useful tools for calculating passenger traffic, creating layout drawings, and applying elevator specifications.

*Elevators & Escalators - MITSUBISHI ELECTRIC*

Escalators' planning is highly dependent on the 'traffic analysis' study. Traffic analysis is the study of the population distribution and their predicted pattern of flow within a day. Efficiency of an escalator system is defined in terms of the quality of service (passenger handling capacity) and quality of service (passenger waiting time).

*Escalators - Engineers Garage*

"I don't know which elevator or escalator I need for my building..." In the Plan module you are guided to the right solution for your project. Enter building details for a traffic analysis. Select your product from a recommended range. Download layout drawings and create a tender specification.
