Another difference between economic analysis and linear programming is that the relationships of economic theory are usually non-linear, depicted by curves (not straight lines), while in linear programming all relationships between the variables involved are assumed to be linear. Methods of non-linear programming have recently been developed, but their exposition involves sophisticated mathematics and will not be attempted here.

~~Linear Programming (Explained With Diagrams)~~

The text combines in a unique and novel way the microeconomics of production with the structure of linear programming to give students and scholars of economics a clear notion of what it means, formulating a model of economic equilibrium and the computation of opportunity cost in the presence of many outputs and inputs.
