I believe Citroen quote something like \u00a3900 (before discount) for the option. With a rear-lounge layout being relatively light at the back end, I was thinking the pneumatic suspension might make the ride more supple and less crashy than the standard leaf-spring; it should also remove that 'tail-in-the-air' attitude common with Sevels.

Citroen Relay - pneumatic rear suspension | Motorhome ...

General Overview: To raise the suspension, we will want to momentarily trigger the air valves and the compressor relay circuit. To lower the suspension we will be activating the same corner valves in combination with the exhaust valve. This is accomplished by manually making circuit connections through the Air Suspension wiring harness.

Manual Technique. There are two parts to the manual: getting the front wheel in the air and finding the balance point to keep it there. The key to both parts is using your body weight. Getting the Front Wheel Up. To get the front wheel off the ground, you need to preload and punch. Preload: The preload part is pretty straightforward. Push your weight down into the bike to preload the suspension.
