Surface engineering is the sub-discipline of materials science which deals with the surface of solid matter. It has applications to chemistry, mechanical engineering, and electrical engineering. Solids are composed of a bulk material covered by a surface. The surface which bounds the bulk material is called the Surface phase. It acts as an interface to the surrounding environment. The bulk material in a solid is called the Bulk phase. The surface phase of a solid interacts with the surrounding e

## ~~Surface Engineering and Coatings~~

Surface engineering spans a wide range of processes. At one end of the scale, ion implantation, nitriding and aluminising affect the chemistry and properties of only a thin surface layer of the substrate, by modifying the existing surface to a depth of 0.001-1.0mm. At the other end of the scale are weld hardfacings and other cladding processes.
