The focus of this review has been on the 200 or so regulations and the 53 Approved codes of practice owned by the Health and Safety Executive. It concentrates on areas where evidence and contributions have indicated that regulations are putting undue costs on business whilst doing little to improve health and safety outcomes. The general sweep of requirements set out in health and safety legislation are broadly fit for purpose but there are a few that offer little benefit to health and safety and which the government should remove, revise or clarify, in particular the duties for self-employed people whose work activities pose no potential risk of harm to others. The much bigger problem is that regulator requirements are misunderstood and applied inappropriately and recommendations are put forward to address this. They seek to: streamline the body of regulation; re-direct enforcement activity towards business where there is the greatest risk of injury or ill health; re-balancing the civil justice system by clarifying the status of pre-action protocols and reviewing strict liability provisions

Offers guidance for employers and self employed people in assessing risks in the workplace. This book is suitable for firms in the commercial, service and light industrial sectors.

As its title suggests, Hall provides more than a thorough overview of the subject; he analyzes the principles that comprise its foundations with an emphasis on their creation and definition by officials. This process is explored in its chapters on legality, mens rea, harm, causation, punishment, strict liability, ignorance and mistake, necessity and coercion, mental disease, intoxication and criminal attempt, as well as its general chapters on criminology, criminal theory and penal theory. Acclaimed when its first edition appeared in 1947, it has been cited regularly ever since.

This analytical study examines the function of internal auditing from the viewpoint of its role within organizations and within the economics of societies and governments. Swanson and Marsh place internal auditing in the context of the scientific conceptual framework of Living Systems Theory, and thus provide a basis for a systematic theoretical framework and a theory based on observable, measurable entities. They identify the advantages of using this system to advance the knowledge and understanding of organizations, and also propose a higher level of internal audit functions that can advance modern societies.
