The PHP manual is available in a selection of languages and formats. Pick a language and format from
the table below to start downloading. Notes to read before you download. The English version should be
considered the most accurate, since translations are based on that version. Most of the translations are
not complete, and contain English parts.

~~PHP: Download documentation~~

The PHP Manual is available online in a selection of languages. Please pick a language from the list
below. More information about php.net URL shortcuts by visiting our URL howto page. Note, that many
languages are just under translation, and the untranslated parts are still in English.

If you want to get the name of the user who executes the current PHP script, you can use `<?php $username = getenv ('USERNAME') ?: getenv ('USER'); echo $username; // e.g. root or www-data?>`

~~PHP: get_current_user Manual~~

The administrator can also give users access to certain sections of the Administration panel, keeping important settings or functions restricted and safe from malicious acts. For example, a select group of moderators could be allowed to modify a user's avatar or signature if said avatar or signature is not allowed under a particular forum's rules.

A user guide, also commonly called a technical communication document or manual, is intended to give assistance to people using a particular system. It is usually written by a technical writer, although user guides are written by programmers, product or project managers, or other technical staff, particularly in smaller companies. User guides are most commonly associated with electronic goods, computer hardware and software, although they can be written for any product. Most user guides contain
