those of the Association of Chartered Certified Accountants (ACCA) are dealt with too. The contributors are from a range of South African tertiary institutions ensuring that the book is representative of the way management accounting is taught in this country and taking cognizance of the areas in which students have difficulty.

Course: Principles of Management is the introductory course taken by most undergraduate business majors. Almost every text/course is organized around the four functions of management: planning, leading, organizing, and controlling (PLOC). What makes the texts different are their approach to the subject (principles vs. OB focused) and their strengths of coverage (high/strategic vs. low level/applied/skills). The aim of this text is to show how the four functions interact.

Principles of Management is designed to meet the scope and sequence requirements of the introductory course on management. This is a traditional approach to management using the leading, planning, organizing, and controlling approach. Management is a broad business discipline, and the Principles of Management course covers many management areas such as human resource management and strategic management, as well behavioral areas such as motivation. No one individual can be an expert in all areas of management, so an additional benefit of this text is that specialists in a variety of areas have authored individual chapters.

Management principles: a contemporary edition Africa, focuses on these core management principles. It provides learners with a sound knowledge of the business environment, how to manage scarce resources, and the functions of planning, organising, leading and controlling. The book also highlights the importance of sound decision-making, information management, optimising a diverse workforce, managing different organisational cultures, managing

Project Management for Engineering, Business and Technology, 5th edition, addresses project management across all industries. First covering the essential background, from origins and philosophy to methodology, the bulk of the book is dedicated to concepts and techniques for practical application. Coverage includes project initiation and proposals, scope and task definition, scheduling, budgeting, risk analysis, control, project selection and portfolio management, program management, project organization, and all-important "people" aspects—project leadership, team building, conflict resolution and stress management. The Systems Development Cycle is used as a framework to discuss project management in a variety of situations, making this the go-to book for managing virtually any kind of project, program or task force. The authors focus on the ultimate purpose of project management—to unify and integrate the interests, resources and work efforts of many stakeholders, as well as the planning, scheduling, and budgeting needed to accomplish overall project goals. This new edition features: Updates throughout to cover the latest developments in project management methodologies New examples and 18 new case studies throughout to help students develop their understanding and put principles into practice A new chapter on agile project management and lean Expanded coverage of program management, stakeholder engagement, buffer management, and managing virtual teams and cultural differences in international projects Alignment with PMBOK terms and definitions for ease of use alongside PMI certifications Cross-

Autonomic networking aims to solve the mounting problems created by increasingly complex networks, by enabling devices and service-providers to decide, preferably without human intervention, what to do at any given moment, and ultimately to create self-managing networks that can interface with each other, adapting their behavior to provide the best service to the end-user in all situations. This book gives both an understanding and an assessment of the principles, methods and architectures in autonomous network management, as well as lessons learned from, the ongoing initiatives in the field. It includes contributions from industry groups at Orange Labs, Motorola, Ericsson, the ANA EU Project and leading universities. These groups all provide chapters examining the international research projects to which they are contributing, such as the EU Autonomic Network Architecture Project and Ambient Networks EU Project, reviewing current developments and demonstrating how autonomic management principles are used to define new architectures, models, protocols, and mechanisms for future network equipment. Provides reviews of cutting-edge approaches to the management of complex telecommunications, sensors, etc. networks based on new autonomic approaches. This enables engineers to use new autonomic techniques to solve complex distributed problems that are not possible or easy to solve with existing techniques. Discussion of FOCAL, a semantically rich network architecture for coordinating

the behavior of heterogeneous and distributed computing resources. This provides vital information, since the data model holds much of the power in an autonomic system, giving the theory behind the practice, which will enable engineers to create their own solutions to network management problems. Real case studies from the groups in industry and academia who work with this technology. These allow engineers to see how autonomic networking is implemented in a variety of scenarios, giving them a solid grounding in applications and helping them generate their own solutions to real-world problems.

Book & CD. To improve on an award-winning book poses a major challenge to its authors. The authors of this book took the challenge head-on by conducting a major research study to determine what exactly the outcomes are that managers at different levels must deliver in contemporary organisations in South Africa, and the rest of Africa. The findings of this study, which dealt with current and near-future management issues, as well as classical and contemporary thinking about management, were used as the blueprint for the updating of this book. After placing management in context, the authors deal with the knowledge, skills and dispositions required of managers to perform the management functions of planning, organising, leading and controlling in a volatile business world. Examples of how the functions are applied in practice are cited throughout the book. These examples refer mainly to South African organisations and situations that managers in South Africa, and Africa, have to deal with to create and sustain a competitive advantage for their organisations. The book endeavours to break down the silo effect of seeing the management functions as separate activities. This is done by continuously placing the management function at hand in a bigger context. This enables learners of management to assess the implications of management decisions on different people, processes, systems and so on that make up the organisation.
