It is not usual to lose protein in the urine. When this does happen it is known as 'Proteinuria'. Several proteins can be found in the urine, but the most relevant to kidney disease is albumin. Protein in the urine is not usually obvious, but can be detected by a simple dip- stick test, or sometimes by more sensitive lab tests.

~~Protein in urine (Proteinuria) - NHS~~

People with proteinuria have unusually high amounts of protein in their urine. The condition is often a sign of kidney disease. Your kidneys are filters that don't usually let a lot of protein pass...

~~Protein in Urine (Proteinuria) Causes and Symptoms ...~~

Protein in urine is a symptom of kidney disease, specifically the protein albumin. CKD progresses slowly and most symptoms don't become fully apparent until it has reached a more advanced stage of deterioration. Proteinuria, therefore, is an important indicator that can be seen before other symptoms, particularly in diabetics.

~~Protein in Urine: Causes, Symptoms, and Treatment~~

Proteinuria describes the presence of protein in the urine. It is often defined as an amount in excess of 300 mg per day. Proteinuria is associated with

cardiovascular and renal disease and is a predictor of end organ damage in patients with hypertension.

~~Proteinuria. Free medical information about Proteinuria ...~~

Persistent proteinuria. This is when the protein levels in your urine remain elevated with repeat testing. It is indicative of an underlying problem such as kidney disease, diabetes, autoimmune disease, or another medical condition. It will require a series of tests for diagnostic purposes, as well as medical treatment.

~~How to Reduce Protein in Urine: Doctor Approved Treatments~~

Proteins are found in urine at varying levels. A protein in urine normal range is used as a standard against which all results are compared. The level of proteins in urine may temporarily rise due to diet, physical exertion and disease. Presence of unusually high levels of protein in urine is called Proteinuria or Albuminuria.

~~Protein in Urine Normal, Low, High Ranges | Signs, Types of ...~~

Proteinuria is the presence of excess proteins in the urine. In healthy persons, urine contains very little protein; an excess is suggestive of illness. Excess protein in the urine often causes the urine to become foamy (although this symptom may also be caused by other conditions).

~~Proteinuria — Wikipedia~~

Proteinuria is increased levels of protein in the urine. This condition can be a sign of kidney damage. Proteins - which help build muscle and bone, regulate the amount of fluid in blood, combat infection and repair tissue - should remain in the blood. If proteins enter the urine they ultimately leave the body, which isn't healthy.

~~Proteinuria: Causes, Symptoms, Tests & Treatment~~

If the filters in our kidneys are damaged, increased amounts of albumin and other larger proteins from our blood can pass through and escape into the urine. This abnormal amount of protein in the urine is known as proteinuria.

~~Proteinuria | Causes, Tests and Treatment | Patient~~

Conditions that can cause a temporary rise in the levels of protein in urine, but don't necessarily indicate kidney damage, include: Dehydration
Emotional stress Exposure to extreme cold Fever Strenuous exercise

~~Protein in urine Causes — Mayo Clinic~~

Proteinuria, the presence of increased quantities of protein in the urine [1, 2] can be detected by a variety of methods [3] including reagent-strip tests (e.g. Albustix™), which can be used in a point-of-care testing environment, and chemical tests available in the laboratory.

~~Does urinary tract infection cause proteinuria or ...~~

Protein in urine - known as proteinuria (pro-tee-NU-ree-uh) - is excess protein found in a urine sample. Protein is one of the substances identified during a test to analyze the content of your urine (urinalysis). Low levels of protein in urine are normal. Temporarily high levels of protein in urine aren't unusual either, particularly in younger people after exercise or during an illness.

~~Protein in urine — Mayo Clinic~~

Proteinuria is a condition characterised by the presence of greater than normal amounts of protein in the urine. It is associated with a variety of different diseases and is sometimes seen in those who are apparently healthy. Mild or transient proteinuria may become more severe over time.

~~Proteinuria — Lab Tests Online UK~~

Proteinuria is a condition that occurs when there is a greater than normal amount of protein in the urine. It is usually associated with some kind of underlying disease or abnormality but may occasionally be seen in healthy individuals. Urine normally contains a small amount of protein.
