Theorem can be written in the following manner:  $a^2+b^2=c^2$ . In Pythagorean Theorem,  $c$  is the triangle's longest side while  $b$  and  $a$  make up the other two sides. The longest side of the triangle in the Pythagorean Theorem is referred to as the 'hypotenuse'. Many people ask

The Pythagorean Theorem is a special case of the Law of Cosines, which states that:  $c^2 = a^2 + b^2 - 2ab \cos \theta$  where  $\theta$  is the angle opposite side  $c$ . In the case of a right triangle, the cosine of  $90^\circ$  is 0 and the equation

# Download Ebook Pythagorean Theorem

the right angle is the hypotenuse or  $c$ .

$$c^2 = a^2 + b^2. \quad c^2 = 11^2 + 60^2. \quad c^2 = 121 + 3600. \quad c^2 = 3721. \quad c \text{ is equal to the square root of } 3721, \text{ so } c = 61.$$

Now here is how to check your answer with the Pythagorean theorem calculator.
