The rapid reporting session comprises of 30 images, the reporting sessions comprises of 6 cases and the oral sessions have two examiners each which show the candidate images.

FRCR—Medical Certificates—Fellowship of the Royal —

Providing everything you need to pass the FRCR Part 2A, this book provides a thorough assessment of a candidate's radiological knowledge. The book is divided into six chapters, with 75 questions in each chapter, mirroring the modules and exam papers laid out by the Royal College of Radiologists.

Comprehensive medical imaging physics notes aimed at those sitting the first FRCR physics exam in the UK and covering the scope of the Royal College of Radiologists syllabus. Written by Radiologists, the notes are concise and clearly organised with 100's of beautiful diagrams to aid understanding. The notes cover all of radiology physics, including basic science, x-ray imaging, CT, ultrasound, MRI, molecular imaging, and radiation dosimetry, protection and legislation. Although aimed at UK radiology trainees, it is also suitable for international residents taking similar examinations, postgraduate medical physics students and radiographers. The notes provide an excellent overview for anyone interested in the physics of radiology or just refreshing their knowledge. This third edition includes updates to reflect new legislation and many new illustrations, added sections, and removal of content no longer relevant to the FRCR physics exam. This edition has gone through strict critique and evaluation by physicists and other specialists to provide an accurate, understandable and up-to-date resource. The book summarises and pulls together content from the FRCR Physics Notes at Radiology Cafe and delivers it as a paperback or eBook for you to keep and read anytime. There are 7 main chapters, which are further subdivided into 60 sub-chapters so topics are easy to find. There is a comprehensive appendix and index at the back of the book.

This book provides readers with a comprehensive evaluation of paediatric radiographs in preparation for the demanding Rapid Reporting component of the Fellowship of the Royal College of Radiologists (FRCR) Part 2B examination, where the margin between pass and fail is very narrow. While other resources may include only a handful of paediatric images in a practice reporting packet, this book is dedicated solely to improving paediatric reporting skill and knowledge. It is designed to address an important deficiency identified in the FRCR Part 2B Examiners' Report, in that "many candidates struggle with interpretation of paediatric imaging – even for common paediatric pathologies". The ten practice tests presented, each with 30 images, will assist readers not only in passing the examination but also in the real world when they have to report paediatric radiographs independently. The range of cases covered, from neonate to adolescent, delivers a sound knowledge of both common paediatric fracture patterns and patterns which are subtler but require a definitive answer as to whether they are normal or abnormal. Guidance is also provided on how to describe each abnormality.

This book provides readers with a comprehensive evaluation of paediatric radiographs in preparation for the demanding Rapid Reporting component of the Fellowship of the Royal College of Radiologists (FRCR) Part 2B examination, where the margin between pass and fail is very narrow. While other resources may include only a handful of paediatric images in a practice reporting packet, this book is dedicated solely to improving paediatric reporting skill and knowledge. Final FRCR 2B Viva: A Survival Guide presents a series of cases similar to those used in the FRCR exams and representative of everyday radiological practice. This invaluable collection of high quality images is accompanied by clear and concise explanations, enabling trainees to prepare fully for their FRCR 2B viva presentation. Covering the full range of imaging modalities and organ systems, it provides clinically important vignettes which help the reader to impress examiners and colleagues, and enhance the trainee's ability to come up with differential diagnoses. Concise key points for each case provide additional diagnostic information which would impress an examiner. Written by a team of expert consultant radiologists and several recently successful FRCR Part 2 candidates, Final FRCR 2B Viva: A Survival Guide is an essential purchase for all radiology trainees.

FRCR Part 1 Anatomy Mock MCQ Examinations provides essential practice for the new anatomy examination introduced by the Royal College of Radiologists. Written according to the syllabus set by the Royal College, each mock examination is laid out and structured in the same way as the actual papers, ensuring users gain familiarity with both the content and the style. Containing 10 mock examinations and 200 high quality MRI, CT, ultrasound, fluoroscopy, angiography and plain film images, all anatomical areas are covered, including normal variants and paediatric cases. By the end of the book, readers will have encountered every imaging modality and the majority of cases covered in the exam itself. Written by specialist registrars and a highly experienced radiology consultant and Fellowship examiner, FRCR Part 1 Anatomy Mock MCQ Examinations is the must-have revision tool for all Part 1 FRCR candidates.

Physics MCQs for the Part 1 FRCR is a comprehensive and practical revision tool for the new format Part 1 FRCR examination, covering the complete physics curriculum. Key features: • Contains 300 questions that reflect the style and difficulty of the real exam • Covers basic physics, radiation legislation and all the imaging modalities included in the Royal College of Radiologists training curriculum and new FRCR examination • Includes new exam topics such as MRI and ultrasound imaging • Answers are accompanied by clear, detailed explanations giving candidates in-depth understanding of the topic • Much of the question material is based on the Radiology-Integrated Training Initiative (RITI), as recommended by the Royal College of Radiologists A must-have revision resource for all Part 1 FRCR candidates, Physics MCQs for the Part 1 FRCR is written by a team of specialist registrars who have recently successfully passed the Part 1 FRCR exam and a renowned medical physicist.

Part 2B of the FRCR examination for trainee radiologists involves six 'long cases', which can contain images of any body system and any imaging modality: plain film, CT, MRI, ultrasound, nuclear medicine and contrast studies. FRCR 2B: A Guide to the Long Cases contains 60 highly illustrated long cases and answers, organised into 10 sets of 6 cases. The cases are based on the format of the exam and the answers are at the level of detail the candidate would be expected to provide in the time allocated. An introductory section explains the College's marking scheme and advises on the best approach to the long cases and how to structure an answer. A succinct topic review is provided with each case. Jointly edited by a successful FRCR fellow and an experienced consultant radiologist, FRCR 2B: A Guide to the Long Cases is essential reading for all exam candidates.

Exclusively focused on preparing candidates for the FRCR Part 1 anatomy viewing paper, this book enables them to practice questions that have the look and feel of the actual exam. Containing eight practice examinations, each with 20 cases which have been thoroughly reviewed and tested by radiology registrars who have sat the exam, the questions are at increasing levels of difficulty. Screenshots from Osirix and advice on how to approach the exam familiarize candidates with its format. Each exam in the book contains a wide selection of images with all body parts and modalities equally represented to thoroughly test candidates interpretation skills. The 160 images cover all major plain films, CT, MRI, barium studies and other contrast examinations, as well as some of the newer techniques, based on the examples published online by the Royal College of Radiologists.
