## Solutions

explained in terms of the complex reaction network notation where the rate for the  $j$ th species is given :

$$N \frac{dy_j}{dt} = k_{j1} y_1 - k_{j2} y_2 + \dots - k_{lj} y_j \quad (1)$$

A solution is assumed of the form:

$$y_j = Y_j e^{-\lambda t} \quad (2)$$

where  $Y_j$  and  $\lambda$  are constants to be determined.
