System analysis is conducted for the purpose of studying a system or its parts in order to identify its objectives. It is a problem solving technique that improves the system and ensures that all the components of the system work efficiently to accomplish their purpose. Analysis specifies what the system should do.

System Analysis and Design - Overview - Tutorialspoint

System analysis deals with the client issues and modification that has to be done in the project whereas system design deals with the requirement of the client and need of the customer. If in IT industry system analysis is considered then the team like IQMS they deal with fixing bug where about if designing is considered then the people like a web developer and Android developer are considered.
