sharing their data with the flying community (identity of the pilots will not be shared).

Takeoff Advisor :: Inflight Metrics Actions (Take-off, Landing, Arming, etc) The Action class is used for commanding the vehicle to arm, takeoff, land, return home and land, disarm, kill and transition between VTOL modes.. Most of the methods have both synchronous and asynchronous versions. The methods send commands to a vehicle, and return/complete with the vehicle's response.

returns to water, the process is called alighting, although it is commonly called "landing" and "touchdown" as well. A normal aircraft flight would include several parts of flight including taxi, takeoff, climb, cruise, descent and landing.

Takeoff and landing - Wikipedia
Consult the POH for the recommended take-off speed. In the event that the POH does not specify a speed, the takeoff should be achieved at or above V_{MC} . After the takeoff, accelerate the aeroplane to the best rate of climb speed (V_Y) as quickly as possible, and climb at V_Y until a safe manoeuvring altitude is reached.
