### 4 Temperature Dependence Of Electrical Resistivity

#### Temperature Dependence of

Resistivity Based on the conductivity of the materials, they are classified into three – conductors, semiconductors, and insulators. Conductors have low resistivities ranging from  $10^{-8} \text{ m}$

Dependence Of  
Resistance Resistance is  
fundamentally the  
ability of the material to  
restrict the passage of  
electric current. Thus,  
just as material  
properties such as  
density, size,  
magnetisation etc.  
Change with  
temperature, so does  
resistance.
