The description for this book, The Gothic Cathedral: Origins of Gothic Architecture and the Medieval Concept of Order, will be forthcoming.

Robert A. Scott explores why medieval people built Gothic cathedrals, how they built them, what conception of the divine lay behind their creation and the social and political uses made of cathedrals by religious and secular leaders.

Gothic cathedrals are monuments to God, witnesses to the historic power of the Church, and symbols of the faith of the thousands of believers who contributed to their creation. They are also astonishing feats of construction and engineering, from a period before steel-making, machine tools and computer simulation; breathtaking in their scale and grandeur even hundreds of years after the religious impulse that produced them has largely faded away. How to Build a Cathedral is a visual exploration of the building of these masterpieces, from the initial groundplan to the topping out of the spire. Illustrated throughout with beautiful engravings, it looks at each element of the structure in turn, explaining the process of construction and the methods that were used. At intervals though the book, special gatefold pages offer a detailed snapshot of the evolution of the building as it rises into the heavens. A 16-page colour section allows for appreciation of stained glass and decorative stonework. With text written by a leading architectural historian, How to Build a Cathedral is an illuminating portrait of the genius of the medieval architect.

Text and detailed drawings follow the planning and construction of a magnificent Gothic cathedral in the imaginary French town of Chutreaux during the thirteenth century.

Ever since they were first built, the great medieval cathedrals of Europe have inspired successive generations of pilgrims, worshippers, and casual visitors. In this remarkable, fully illustrated work, Goldian VandenBroeck has concentrated her attention on the: cathedrals as buildings. Reading her 52 sonnets, in the light of her matching illustrations, we are able to enter not only the spirit of the builders, but the very processes whereby the buildings, stone by stone, erect their meaning and philosophy.
