pcb-gcode Since 2003, I have written and maintained pcb-gcode, a plugin for the Eagle schematic capture and board layout program. Pcb-gcode generates gcode to be used by a CNC router or milling machine to cut out tracks in a printed circuit board, as well as drill holes for components, cut the board out, and even engrave text.

pcb-gcode-3.3.2.zip by admin. Now much easier to use! Pcb-gcode creates g-code files to allow you to produce a printed circuit board using a CNC router or milling machine. Supports outlining tracks (mech. etching), drilling and milling. Removes slivers by offsetting outline passes. Includes a setup screen that eliminates editing config files.
