Kissing Why Do We Kiss? The Science

Of Kissing What

Kissing naturally relaxes you. When humans kiss, their brains release chemicals like oxytocin, dopamine and serotonin.

Oxytocin is the chemical linked to pair-bonding, and it's been nicknamed the “the love hormone” for a reason. These

The Science of Kissing | Teen Vogue

Evolutionary biologists suggest that erotic kissing is a so-called relic gesture, passed down through cultures from these early practices of the mother's deep kissing and the infant's searching...

Science of kissing: why a kiss is not just a kiss

Kirshenbaum examines both lips and kissing from an evolutionary, psycho-social, and biological point of view - each of which is equally fascinating. The lips alone are kind of a mind-blowing structure; densely packed with nerve endings, the lips respond intensely to every kind of stimuli which, in turn, triggers a massive response in the brain.

*The Science Of Kissing: What Our Lips
Are Telling Us By ...*

It may surprise you, but scientists actually believe that the romantic kiss we know now evolved from kiss-feeding, a process in which mothers would feed their babies mouth-to-mouth. Although this may not sound very pleasant, it was a common practice for humans and is thought to have led to the affectionate kissing we know today.

Science of kissing - Labello

Kissing is good for your health in many ways: Reduces pain and stress. A kiss triggers the release of endorphins (natural painkillers which also enhance pleasure) and lowers cortisol levels (which influence stress).
