Rural communities in Japan have suffered from significant depopulation and economic downturn in post-war years. Low birth rates, aging populations, agricultural decline and youth migration to large cities have been compounded by the triple disaster of 11 March 2011, which destroyed farming and fishing communities and left thousands of people homeless. This book identifies these challenges and acknowledges that an era of post-growth has arrived in Japan. Through exploring new forms of regional employment, community empowerment, and reverse migration, the authors address potential opportunities and benefits that may help to create and ensure the quality of life in depopulating areas and post-disaster scenarios. This book will be of interest not only to students of Japanese society, but also to those outside of Japan who are seeking new approaches for tackling depopulation challenges.

This book traces the history of the relationship between work and leisure, from the ‘leisure preference’ of male workers in the eighteenth century, through the increase in working hours in the later eighteenth and early nineteenth centuries, to their progressive decline from 1830 to 1970. It examines how trade union action was critical in achieving the decline; how class structured the experience of leisure; how male identity was shaped by both work and leisure; how, in a society that placed high value on work, a ‘leisured class’ was nevertheless at the apex of political and social power – until it became thought of as ‘the idle rich’. Coinciding with the decline in working hours, two further tranches of time were marked out as properly without work: childhood and retirement. Accessible, wide-ranging and occasionally polemical, this book provides the first history of how we have imagined and used time.
